

Mohamed Salah BDIoui

SOFTWARE ENGINEER | LOGISTICS OPTIMIZATION & SMART SYSTEMS

📍 Hettange-Grande, France, 57330 📞 +33 6 09 17 87 32 ✉ bdiouimedsalah@gmail.com

🌐 salahfolio.netlify.app 🔗 linkedin.com/in/medsalahbdioui 🇫🇷 French Citizen

Highly analytical Senior Software Engineer with 6+ years of experience designing scalable software systems, optimization-oriented solutions and data-driven applications. Experienced in logistics platforms, route optimization, operational workflow analysis and software validation within complex industrial environments. Strong background in software engineering, CI/CD, TDD, performance analysis and Agile project delivery. Skilled in Kotlin, Java, Python and SQL, with a proven ability to transform operational challenges into reliable and maintainable software solutions.

PROFESSIONAL EXPERIENCE

Software Developer Consultant 2025-07 — 2026-06

NeoPixl Luxembourg

Differdange, Luxembourg

- **Software Architecture & MVP Delivery:** Designed and delivered two software products from concept to MVP, making them ready for production in less than three months.
- **Software Engineering Standards:** Set up software architecture, development standards, CI/CD pipelines and testing practices to ensure maintainable code.
- **Technical Leadership:** Worked closely with designers, product owners and developers to turn business requirements into technical solutions.
- **Quality Engineering:** Improved code quality by introducing SonarQube, Detekt and automated quality checks.
- **Validation & Reporting:** Performed performance testing, documented technical solutions and produced project reports for future maintenance and team knowledge sharing.

SKILLS

Languages

Kotlin

Java

Python (Working Knowledge)

GraphQL

UI & Declarative

Jetpack Compose

Material 3

ViewBinding

ConstraintLayout

XML Layouts

Architecture

MVI

MVVM

Clean Architecture

SOLID

Software Developer Consultant 2023-01 — 2025-06

Elis Paris

Paris, France

- **Logistics Platform Engineering:** Developed features for an international logistics platform used for route planning, inventory management and field operations.
- **Route Optimization:** Implemented route optimisation features using HERE SDK while considering vehicle and location constraints.
- **Operational Workflow Analysis:** Worked with business teams to improve logistics processes and operational efficiency.
- **Event Processing & Synchronisation:** Implemented real-time data synchronisation for inventory updates and field activity tracking.
- **Performance Investigation:** Investigated performance issues on Zebra and Chainway devices and improved application reliability.
- **International Deployments:** Collaborated with product owners and operational stakeholders to validate solutions and support deployments in Brazil, Canada and multiple European countries.

Software Developer Consultant 2022-06 — 2022-12

Safello Stockholm

Stockholm, Sweden

- **Data Aggregation Pipelines:** Integrated data from multiple third-party APIs and external services.
- **Reactive Stream Modeling:** Developed reliable data processing workflows able to handle high traffic and temporary network failures.
- **Technical Documentation:** Produced technical documentation to support maintenance and knowledge sharing.

Presales Engineer 2021-12 — 2022-06

Klanik Marseille

Marseille, France

- Led presales workshops for web and mobile projects, translating client needs into functional scopes, risk assessments, and accurate effort estimations.
- Designed and prototyped front-end solutions using React and React Native, demonstrating feasibility and

accelerating contract closures.

- Collaborated with delivery teams to ensure proposed architectures aligned with company tech standards (clean architecture, CI/CD, testing strategies).
- Authored commercial proposals and technical annexes used by the sales team to win new accounts.

Mobile Developer (Native & Hybrid)

2020-09 — 2021-11

Infostrates Marseille
Marseille, France

- **System Modernization:** Led a major architecture modernization initiative, migrating legacy systems to modern reactive frameworks and improving application stability.
- **API Optimization:** Leveraged GraphQL for high-efficiency data fetching and used Charles Proxy for testing and validating network payloads.

Software Engineer Consultant

2019-11 — 2020-02

SFR Grenoble
Grenoble, France

- Developed core features for the GENT8TV set-top box application, displaying live and recorded TV programmes with advanced filtering.
- Integrated playback control fragments into the main video stream, enabling rewind, fast-forward, and 'continue watching' functionality.
- Performed a full UI overhaul, migrating legacy layouts to ConstraintLayout and ViewBinding for a more fluid interface.

Software Engineer

2017-09 — 2019-07

Orange Grenoble
Grenoble, France

- **Applied Research & AI:** Maintained systems for industrial process digitalization and smart buildings, integrating a DialogFlow conversational AI chatbot into technical workflows.
