

Mohamed salah BDIOUI

ANDROID NATIVE SOFTWARE ENGINEER

Senior Android Engineer with 6+ years of experience building scalable, maintainable apps using Kotlin and Jetpack Compose. Expert in modern architectures (MVI, MVVM, Clean Architecture), test automation (code coverage >70%), and CI/CD pipelines. Proven track record of delivering production-critical applications for fintech, logistics, entertainment, and IoT. Fluent in English and French, comfortable in international, agile environments

EDUCATION

Computer Science Engineer (Software engineering)

UTBM - Territoire de Belfort - From September 2014 to October 2018

WORK EXPERIENCE

Android Senior Consultant

NeoPixl Luxembourg - Differdange, Luxembourg - From July 2025 to January 2026

- Architected and built two greenfield Android applications (e-banking and junior athletics coaching) from scratch using **Kotlin, Jetpack Compose, and MVI architecture**, delivering a fully functional MVP in under 3 months.
- Enforced code quality by integrating **Detekt, Danger, and SonarQube** into the CI pipeline, raising code coverage from 20% to over 70%.
- Automated continuous integration and delivery with **Bitrise**, ensuring every commit was built, analysed, and tested before merging.
- Acted as Lead Tech Android: defined technical roadmaps, distributed tasks, performed code reviews, and mentored developers on Compose best practices.
- Documented functional and technical specifications in **Confluence**, tracked tasks in **Redmine**, and aligned UI implementation with **Figma** mockups.
- Performed stress and performance testing, ensuring app stability under load for the banking client.

Android Senior Consultant

Elis - Paris - From January 2023 to June 2025

- Developed a B2B logistics application used daily by field agents to manage cleaning rounds, inventory, uniform collection, and pest control visits, deployed internationally in **Brazil and Canada**.
- Refactored a legacy Java codebase to **Kotlin** with **RxJava** and **MVVM**, eliminating all memory leaks and reducing cold start time.
- Built an intelligent route optimisation feature using **Here SDK (V3/V4)** that adapts itineraries by vehicle type and respects low-emission zones (ZFE).
- Implemented real-time data synchronisation with the back office for visit proofs, break reports, and inventory updates.
- Audited and resolved hardware-specific performance issues on **Zebra and Chainway PDAs**, ensuring smooth operation on low-resource devices.
- Managed international rollouts including customs and regulatory adaptations for countries like Poland, collaborating directly with product owners and local stakeholders.

Freelance Android Developer

Safello - Stockholm, ST, Sweden - From June 2022 to December 2022

- Built a cryptocurrency portfolio and news application from scratch using **Kotlin, Jetpack Compose, and Material 3**, delivering a modern, expressive UI.
- Integrated multiple third-party exchange APIs (**Binance, BitGet, Kraken**) to aggregate user asset data and display real-time charts.
- Connected blockchain explorer APIs (**Arkham, Polygonscan**) to retrieve full transaction histories and present hashes in a user-friendly format.
- Applied **MVVM architecture** with **Flow** and **Coroutines** to create a reactive data layer that gracefully handled rate limits and network failures.
- Migrated existing XML layouts to Compose, improving UI maintainability and reducing boilerplate code.
- Wrote technical specifications for the entire data integration layer, enabling seamless handover to the client's internal team.

Presales engineer

Klanik - Marseille - From December 2021 to June 2022

- Led presales workshops for web and mobile projects, translating client needs into functional scopes, risk assessments, and accurate effort estimations.
- Designed and prototyped front-end solutions using **React** and **React Native**, demonstrating feasibility and accelerating contract closures.
- Collaborated with delivery teams to ensure proposed architectures aligned with company tech standards (clean architecture, CI/CD, testing strategies).
- Authored commercial proposals and technical annexes used by the sales team to win new accounts.

TECHNICAL SKILLS

- Languages: Kotlin, Java, SQL
- UI & Declarative: Jetpack Compose, Material 3, ViewBinding, DataBinding, ConstraintLayout, XML Layouts
- Architecture: MVI, MVVM, Clean Architecture, Repository Pattern, SOLID Principles Core Android: Coroutines, Flow, ViewModel, Room, WorkManager, LiveData, RxJava (migration experience)
- Networking: Retrofit, OkHttp, GraphQL, REST APIs, WebSockets, Postman, Charles Proxy CI/CD & Quality: Bitrise, Jenkins, GitLab CI, SonarQube, Detekt, Danger, TDD, JUnit, Espresso, Appium, Detox
- Location & Maps: Here SDK (V3/V4), Geofencing SDKs & Integrations: DialogFlow (Chatbot), HF/NFC/Bluetooth integration, Zebra/Chainway PDA APIs
- Tools: Git, Redmine, JIRA, Confluence, Figma, Android Studio

WORK EXPERIENCE

Mobile Developer (native and hybrid)

Infostrates - Marseille - From September 2020 to November 2021

- Served as Senior Android Developer for the **Ponant Compagnon** luxury cruise ship application, ensuring a successful launch of the Commandant Charcot vessel.
- Led a major refactoring initiative, migrating **RxJava** to **Coroutines** across the entire codebase, reducing thread management complexity and improving crash-free rates.
- Implemented feature flags to conditionally enable services before/after the voyage, including newsletters, room service, and live camera views.
- Collected and challenged client requirements directly, translating them into technico-functional specifications and accurate work plans.
- Onboarded and mentored junior and medior developers, raising team productivity and adherence to coding standards.
- Used **GraphQL** for efficient data fetching, **Charles Proxy** for debugging network calls, and **MVVM** for presentation layer architecture.

Android TV Developer

SFR - Grenoble - From November 2019 to February 2020

- Developed core features for the **GENT8TV** set-top box application, displaying live and recorded TV programmes with advanced filtering (favourites, in progress, recorded).
- Integrated playback control fragments into the main video stream, enabling rewind, fast-forward, and "continue watching" functionality.
- Performed a full UI overhaul, migrating legacy layouts to **ConstraintLayout** and **ViewBinding**, resulting in a more fluid and responsive interface.
- Fixed critical bugs and improved code maintainability, directly contributing to a better end-user experience for SFR subscribers.

Project Engineer

Orange - Grenoble - From September 2017 to July 2019

- Maintained and enhanced native Android applications for industrial process digitalisation (smart building) using **Java and Kotlin**.
- Integrated a **DialogFlow** chatbot into an existing application, adding conversational capabilities for field technicians.
- Modernised application architecture by introducing **Jetpack ViewModel, DataBinding, LiveData, and Coroutines**, resulting in a more reactive and maintainable codebase.
- Collaborated in R&D workshops to analyse feasibility and propose technical solutions aligned with Orange's design charter.
- Applied clean architecture principles to decouple business logic from UI, significantly simplifying unit testing and future feature additions.
